

Create and manage your Web-based projects in one place, using one tool, anywhere, anytime

Lectora Online is a Web-based, collaborative, development tool used for the creation, storage, management, review, and publishing of online training courses, assessments, presentations, Web sites, games, and more.

www.lectoraonline.com

Who is it for?

Small to Large Teams of Content Developers
Let Lectora Online streamline your project life cycle. Maintain project versions, create assignments, review comments, and obtain final project approval all from a single, central location. Eliminate the hassles of making content available to developers, editors, and subject-matter experts that may not have the software to support it.

The Geographically Challenged
Work with team members across state lines, time zones or even continents from a central, secure location... without getting a System Administrator involved. Access Lectora Online anywhere, anytime to create, delegate, and collaborate, and let us worry about keeping it secure and organized.

Organizations with Storage and Security Concerns
Safely store all your project files and media in one central location on Lectora Online's secure server. Never worry again about storage space on your computer or your organization's network. Lectora Online backs up your data regularly and ensures that only you and the members of your team can access it.

Lectora Online combines the same development tools of the award-winning Lectora Publisher with the power of the Internet. Not only can you develop your content, but Lectora Online enables teams of users to effectively collaborate on projects, manage project tasks, maintain up-to-date project versions, and publish project content directly to the Web or a Learning Management System.

Create SCORM- and AICC-compliant eLearning content using the familiar tools of Lectora Publisher.

Assign user roles based on tasks. Track developer edits and reviewer comments from initial concept through project completion.

Create assignments for content developers and track their completion throughout the development life cycle.

Work with others simultaneously on the same project while maintaining an up-to-date version of the content at all times.

Exchange feedback with team members through instant messaging, emailing, and posting comments within titles.

Configure notifications to automatically receive emails when project status or assignments change.

Store and organize logos, photos, video, and other media, and make it accessible to teams of users.

Import content created with Lectora Publisher so that it can be used with Lectora Online, or export content created with Lectora Online for use with Lectora Publisher.

Import a PowerPoint presentation to create a new title. Take your existing PowerPoint content and quickly turn it into editable eLearning content.
